

SMB Cybersecurity Disconnect

Small and medium-sized businesses are investing more time, attention, and budget on cybersecurity, but human factors get in the way – creating significant security and business risks.

47% of SMB leaders report recent cybersecurity breaches due to compromised passwords

1 Executives and IT leaders are overly optimistic

92% of executives and 93% of IT leaders believe employees understand security expectations for their jobs

78% of Non-IT leaders are decidedly less confident that employees understand security needs and expectations

Only **3 in 10** leaders believe their company faces a very high risk (8+ of 10) of having a cybersecurity issue

2 Security policies are still being broken

1 in 5 business leaders admits to breaking security policies, as do 1 in 10 IT security leaders

36% of younger workers are more likely to break policies – and Gen Z professionals are twice as likely to physically write down passwords

3 Password management is critically important

73% of IT security leaders say password management is critically important to cybersecurity strategy

81% report using a password manager at work – either company provided or personal choice
